Omega Core Audit TM App for Splunk [®]

For Oracle Database

Security events of your mission-critical Oracle databases at to Splunk

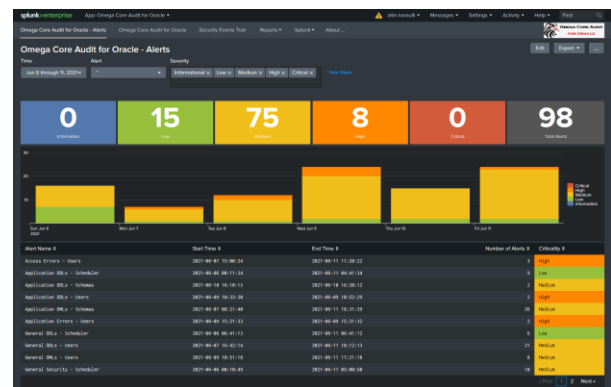

Omega Core Audit for Oracle App for Splunk performs reporting, visualization and analysis of security events of your mission-critical Oracle databases! Omega Core Audit for Oracle App for Splunk integrates Omega Core Audit - another DATAPLUS product - with Splunk.

Omega Core Audit deployments continuously monitor and protect the Oracle databases. Security events are delivered to Splunk at a scheduled interval; enabling storage of the audit and protection events in a central location, visualization and quick access of the databases activity with detailed alerting.

Omega Core Audit App for Splunk - Highlights

- Multiple database support
- Centralized storage of audit trail records
- Historical audit data reporting
- Alerts and Notification
- Splunk visualization standards

Omega Core Audit App for Splunk can be virtually used by any organization that uses an Oracle database and makes use of a Splunk system; and it is looking to implement database information security compliance standards, best industry practices and strong internal security controls.
